## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-23, drawn to a medium of cell culture reagents and a method of culturing mammalian ES cells, classified in classes 435, 435, 435, 435, and 435, subclasses 405, 408, 373, 374, and 395.
- II. Claims 35-36, drawn to a method of using ES cells for generating chimeric animals, classified in class 800, subclass 25.
- III. Claims 37-38, draw to methods of using ES cells for studying or isolating genes or for expression or overexpression of genes, classified in class 435, subclass 6.

Note: It appears that claim 25, as it is directed to an ES cell line, should depend from claim 24. Claim 25 actually depends from claim 20, a method. For the purpose of the instant restriction requirement claim 25 has been treated as if it depends from claim 24.

Claims 24-34 link(s) inventions II and III. The restriction requirement between the linked inventions is subject to the nonallowance of the linking claim(s), claim 24-34. Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application. Applicant(s) are advised that if any such claim(s) depending from or

including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Inventions I-III are distinct each from the other. Inventions are distinct if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are materially different methods that have different purposes and comprise steps that require different technical considerations. For example, the method of Group I is directed to culturing ES cells, while the method of Group II is directed to generating chimeric animals and the method of Group III is directed to identifying and characterizing genes from ES cells. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter and separate search requirement, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
